

KDA Inspected Operations

At inspected slaughter and processing facilities, continuous inspection is provided for commercial slaughter operations, and daily inspection is provided for commercial processing operations. Inspection coverage includes all aspects of intrastate slaughter and processing from ante-mortem inspection through slaughter, processing and to the retail level. The Kansas inspection legend will be applied only to wholesome carcasses and products slaughtered and produced that day. These facilities must be able to provide a clean and sanitary environment for the production of wholesome, unadulterated meat and poultry products.

Products are sampled during inspection and sent to the Kansas Agriculture Laboratory. These samples are analyzed for economic wholesomeness, label guarantees, antibiotic residues, and are tested for harmful food borne bacteria. Laboratory support is also provided for veterinarians in their diagnosis of conditions found in livestock presented for slaughter.

KDA Custom Operations

Custom slaughter and processing facilities are not inspected on a continuous basis. These facilities are inspected for construction and sanitation requirements but on a less frequent basis.

The Kansas Meat and Poultry Inspection Program is a cooperative state-federal program responsible for administering the Kansas Meat and Poultry Inspection Act that governs the wholesomeness, proper labeling and deceptive advertising of meat and poultry products.

Our purpose is to provide for the inspection, labeling and disposition of animals, poultry, carcasses, and meat and poultry products that are to be offered for sale through commercial outlets for human consumption.

This agency is an equal opportunity employer and provider.
